

## **User Inputs:**

Manifest/deployment from user

Archive file from user

Name, identity domain etc.

## **Features Need to Analyse:**

Build Image - Open Issue

Service Binding Support: Open Issue

System Properties: Open Issue

Load Balancer - Set up

IDCS - Open Issue

External Package File - Open Issue

Namespace - can be a parameter to promote isolation

## **Field Mapping:**

Deployment Mapping:

1. Instances: replicas
2. Memory: limits- memory
3. Environment: env - decode/encode?
4. SecureEnvironment: Not Required
5. SystemProperties: NeedToCheck
6. Services: env - decode/encode?
7. Volumes — Not used
8. Space — Not used

Manifest Mapping:

Runtime - Not Needed

Command - command

StartupTime - Not Allowed

ShutdownTime - Not Allowed

IsClustered - Not Required  
RedirectHttpToHttps: Not Required  
RequiresAntiAffinity: Not Allowed  
Type: Worker - Don't set load balancer  
HealthCheck: ?? Aman need to analyze  
Release: label - at. Service level  
LoadBalancingPolicy: Via Load Balancer  
Notes: Label  
Mode: strategy - type  
Home: Not Required

#### Form Parameters:

Runtime: label  
Name: Name  
SubscriptionId: Not Required  
serviceEntitlementId: Not Required  
Region: Not Required  
availabilityDomain: Not Required  
Subnet: Not Required  
IbSubnet: Not Required  
sitParentId: ??  
Subscription: Not Required  
archiveUrl: image  
gitRepoUrl: Not Allowed  
gitUserName: Not Allowed  
gitPassword: Not Allowed  
Notes: label  
Repository: Not Required  
authType: Not Allowed  
loadBalancerType: Not Required  
archiveFileName: Not Required

notificationEmail: Not Allowed

Tags: Labels

archiveSource: Not Required

cfApp: Not Allowed
